

## **River Crossing**

You are a farmer and you want to take your three goods to the market. You have a Chicken, a Fox, and a bag of Corn.

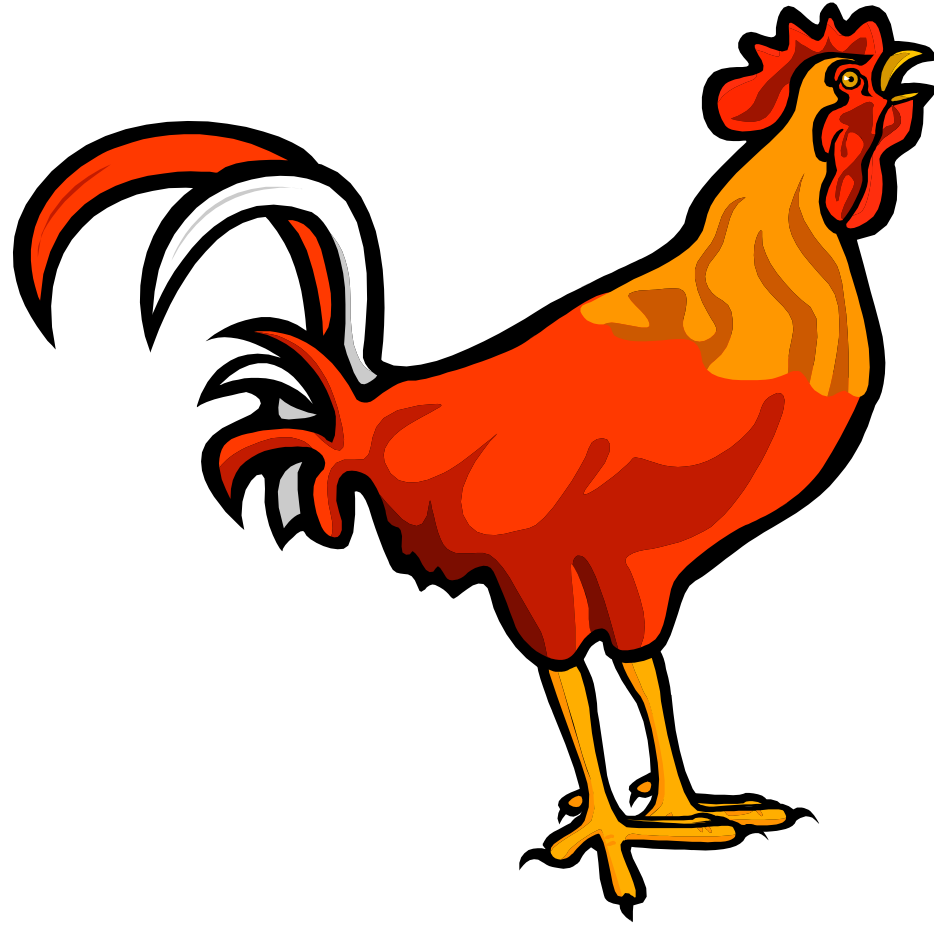

To get to the market, you must cross the river in a small boat. Unfortunately, the boat is only able to take you and **ONE** of your items at a time. To make things more complicated, you cannot leave certain items together as they will be eaten!

- If you leave the chicken with the corn, the corn will get eaten
- If you leave the fox with the chicken, the chicken will get eaten!

As a team, you must work out how to get all the items across the river safely without anything getting eaten.

Good luck!
